DENNIS COCHARDO

Hanover, MD 21076 | 607.339.9782 | denniscochardo3@gmail.com

Security Clearance: TS/SCI

PROFESSIONAL SUMMARY

Software developer with four years of systems administration and cybersecurity experience in the U.S. Navy and hands-on C#/.NET project work from Microsoft's Cloud Application Development program, building desktop apps, REST APIs and database-backed applications. Seeking entry-level software engineering or cloud roles; active TS/SCI clearance.

PROFESSIONAL EXPERIENCE

Software Developer Trainee — Microsoft Software & Systems Academy (MSSA)

2026 – In progress

Cloud Application Development program (in progress): full-time, project-based C#/.NET training sponsored by Microsoft.

- Built a C# fitness app end to end (food library, meal and workout planner, progress tracker), planned with flow diagrams.
- Added file-based saving between sessions and layered error handling so bad input or file errors never crash the app.
- Rebuilt it as a cross-platform Avalonia (XAML) desktop app on the same business logic and published a standalone build.
- Built an ASP.NET Core REST API (full CRUD) with Entity Framework Core, SQLite and Swagger, plus a Windows Forms client for it.
- Modeled relational data with EF Core code-first, database-first and migrations on SQL Server LocalDB, including seed data.
- Implemented linked lists, stacks, queues, binary search trees, recursion and bubble, selection, merge and quick sort in C#.
- Solved weekly challenge labs, group projects and LeetCode problems using generics, delegates, events, LINQ and serialization.

Information Systems Technician (Systems Administrator) — U.S. Navy, USS Ronald Reagan

Oct 2021 – Dec 2025

- Operated and maintained 25+ VMware virtual machines supporting secure shipboard systems and communications platforms.
- Managed 3,000–3,500+ end-user accounts in Active Directory, including provisioning, role-based permissions, and security administration.
- Monitored and validated security compliance across shipboard networks, maintaining 100% adherence to information assurance standards.
- Configured and maintained core network infrastructure (routers, switches, communications systems) across multiple shipboard environments, delivering reliable connectivity for secure operations.
- Sustained continuous, uninterrupted communications for 1,500+ personnel by supporting secure LAN/WAN operations.
- Performed system backups, VM recovery, and switch restoration procedures, preserving 100% data integrity through all operations.
- Led the division as divisional lead, translating senior leadership direction into task assignments and providing technical oversight to division personnel.
- Supervised 50+ personnel as Work Center Supervisor (Team Lead) for preventative maintenance planning, achieving zero mission-critical failures over 3 years.

EDUCATION & TRAINING

Microsoft Software & Systems Academy (MSSA) — Cloud Application Development

2026 (in progress)

Coursework: C# and .NET, data structures & algorithms, .NET MAUI, Azure Fundamentals (AZ-900), AI on Azure and generative AI for .NET (AI-900).

SKILLS & TOOLS

- **Programming & Frameworks:** C#, .NET, ASP.NET Core Web API, Entity Framework Core, LINQ, SQL (SQL Server, SQLite), Avalonia UI, Windows Forms, .NET MAUI, XAML, Object-Oriented Programming, Data Structures & Algorithms
- **Cloud & AI:** Microsoft Azure (compute, storage, networking, identity), Generative AI/LLM integration, Azure OpenAI, Prompt Engineering
- **Systems & Administration:** Windows, Linux, VMware, Active Directory, Microsoft Exchange, SharePoint
- **Networking & Security:** Cisco routers & switches, Cisco Identity Services Engine, Cisco Web Security Virtual Appliance, Information Assurance

CERTIFICATIONS

- CompTIA A+
- CompTIA Security+
- Microsoft Azure Fundamentals (AZ-900) — in progress
- Microsoft Azure AI Fundamentals (AI-900) — in progress
